

Shot Quality Scoring System

**A Contextual Expected Value Framework for
Comprehensive Basketball Evaluation and Decision-Making**

Cal Davis

Introduction

- Where did the idea come from?
 - Coach Long doing “shot quality” for NBA games
- Pros and Cons
 - **Pro 1:** General Concept of Shot Quality
 - **Pro 2:** Aggregated Expectation
 - **Con 1:** Arbitrariness and Bias of Shot Quality Scoring
 - **Con 2:** Scalability
- What to do? Keep the Pros and Correct the Cons!
 - Find shot quality values based on historical data for accuracy
 - Group like-values for scalability
 - Use this information to create score aggregates

Study Procedure

- Data from Mountain East Conference Games (and Salem MEC games)
- All shots categorized by:

Location	Contest	Moving	Dribble
0: Turnover	0: Wide Open	0: Stand Still	0: Catch and Shoot
1: Rim Shot	1: Light Contest	1: Moving	1: Off the Dribble
2: Paint 2	2: Heavy Contest		
3: Midrange	3: Fouled		
4: 3-Pointer			
5: Bonus/Tech			

Preliminary Analysis

Subjective Adages:

- Offensive Rebounds: +1
- Open Stand Still 3's + Paint Touch Stand Still 3's: 6
- "Downgradeable Contests": Take a 6 to a 4 and a 4 to a 3
- Only Score Last Shot

Initiation

- Presentation to Team
- Drill Scoring
 - System Scoring + Wins Leaderboard Motivates Behavior
 - System Makes
- Vocabulary
 - “More plus Better”
 - “Hunting 6’s”
- Additional Dialogue
 - Distinguishing between 3’s and 4’s

Terminology and Formulas

- **Shot Quality:** Average of *all system shots*
- **Stint Quality:** Average of *all system stints*
 - Includes Turnovers
- **Result Quality (Player):** Average of *all system events*
 - Includes OREB
- **Result Quality (Team):** Average of *last system events*
 - Includes OREB
- **Shot Percentage:** Percentage of Shots (and Turnovers) Taken
- **Shot Execution:** Actual Output for each Shot
- **Shot Margin:** Difference in Shots Taken and Shots Allowed
- **Scoring System:** Aggregation of Last Shot and OREB

Future Work (Addressing Threats)

- Handling 7's and 11's
 - Break up into appropriate free throw situations + Integrate Them
- Handling 4's
 - Re-evaluate 4's that are 3-pt shots entirely
 - Shot location (corner), Level of Contest
- Handling 0's
 - Live Ball Added Value
- Handling 1's
 - Blocked Shot Added Value
- Handling Offensive Rebound
 - Live Ball, Off Scoring Shot Added Value
 - Separate Study of Offensive Rebound Creation (Shape, Size, etc.)

Future Work (Addressing Threats)

- Result Quality Disparity
 - All teams Actual PPP greater than Expected PPP
 - 0.10 Avg. Absolute Difference
 - Only 3 Teams within 0.09 PPP
 - For reference, Shot Quality has Avg. Absolute Difference of 0.04, All 12 Teams within 0.07
- Offensive Rebound Correction
 - 3.5/4 OREB Fixes Disparity
 - Illogical Solution

Future Work (Seeking Opportunity)

- Cleaning Up “Downgradeable” Contests
- Building off Coaching the Defense from a System’s Lens
 - Increase 0’s (Turnovers) Always
 - Take Away 6’s (Paint Threats) Especially in Scramble Situations
 - Build off of “No Box”
 - Ramp up Dialogue on Preventing 7’s with Foul Habits
- Recruiting from a System’s Lens
 - “More” Guys, “Better” Guys, Filling a Roster with “More” and “Better”
- Integration (Building a Web App)
- Expanding the Scope
 - All of Division II (National Tournament), Varying Levels of Division I, NBA

Conclusion

- Analytics in Basketball is Growing, Not Reached Division II Level
- Method to the Madness: Aggregation of Expected Value Buckets
- System Scoring: Effective for Decision-Making and Assists Buy-In
 - Roster, Skill Development, Drill Usage, and Scheme Changes
 - Feedback Loops and Mid-Season Report
- Team and Player Improvements
- System Operated at High Accuracy for Predicting Winners
 - Need to Handle 4's and Shot Margin to Solve Result Quality
- Promise to Being Successful at Division II because of System Scoring
 - Using averages to leverage decision-making in the aggregate
- **“What would you expect?”**
